

FillPak Go™

**Small box,
big benefits,
optimal product
protection**

Ranpak®

Simple and highly efficient packaging, for start-up companies or for low-volume Void Fill users, with easy integration into any packing environment.

A unique box design makes FillPak Go™ a winning choice for anyone working with smaller packaging volumes. This is a quick and highly efficient way to fill voids and protect products during transport. Paperstar™ FillPak® paper fills spaces reliably, with simple operation and minimal costs – and sustainability-minded consumers value Greenline® paper that is FSC®-certified, curbside recyclable, renewable, and biodegradable.

KEY FEATURES

Cost efficient

Get started straight out of the box, using less material and with reduced storage costs. Paper is available whenever you need it, on-demand.

Flexible

Compact size and low weight allow FillPak Go to go almost anywhere. The electricity-free solution integrates easily into any packing environment, and Greenline paper suits all of your Void Fill configurations.

Simple

Installation is almost instant, with no training necessary. FillPak Go eliminates labor-intensive paper crumpling by hand. This is a genuine 'tear and go' solution.

Protective

A star-shaped paper pad (Paperstar) pulled straight out of the box ensures superior protection. The pad holds its shape, does not break or deflate, and provides good shock absorption.

APPLICATIONS

FillPak Go can be used across a huge variety of applications, from B2B to retail. It is the solution of choice for start-up e-commerce companies, home-based businesses, private packing shipments, and moving firms. Great sustainability credentials and a high level of protection make FillPak Go an effective solution for sample packs, in shops, and at locations where there is limited

space or where no noise is allowed. This simple device can be positioned easily on a packing station, a retail counter or on a mobile cart, or in a mailroom for convenient packaging.

YOUR BENEFITS

Superior protection

Reliable protection for your products is a must. Our Paperstar paper is well known for filling large voids in boxes, and for using less material to protect products. Greenline paper is an excellent shock absorber, designed to make sure that your products arrive at their destination just as they left your premises.

Easy to use

Simply opening a perforated cutout oval makes FillPak Go immediately ready for use, without electricity. Handling is extremely easy, because the box is small and light enough to go wherever you need it for the best ergonomics. Built-in grips allow the box to be moved quickly, and a glue strip on the bottom secures it in place during use. The front opening reveals how much paper remains.

Sustainable materials

Ranpak is leading the way for sustainable packaging across the globe. Our in-the-box packaging solutions can support your growth, protect the environment, and keep your customers happy. Sustainable, cost-effective, and versatile packaging demonstrates your commitment to the planet.

The Greenline paper used by FillPak Go is a sustainable, post-consumer-recycled paper solution. It is not only curbside recyclable, renewable, and biodegradable, but also FSC®-certified, supporting well-managed forests.

Our purpose

We bring supply chains in balance with the environment and deliver protective packaging solutions that are good for the world, and good for the bottom line.

SIMPLE

FillPak Go box design and renowned Greenline® paper offer unique features:

Compact and sturdy box construction

No training requirement

Perforated cutout oval for easy opening

No electricity needed

Grips on both sides for easy handling

Vertical front opening to see inside

Glue strip on the bottom to secure the box

Mission

We strive to satisfy the protective packaging needs of the present without adversely affecting conditions for future generations.

Sustainability

Our mission is to create innovative solutions for protecting products in ways that benefit businesses, customers, and the environment.

Solution

Our packaging material is made from renewable and/or recycled resources and is biodegradable and curbside recyclable after its useful life ends.

FSC®-certified

As part of our mission to **Deliver a Better World™**, all paper produced by Ranpak EMEA is certified by the Forest Stewardship Council® (FSC®).
