

	<h2>Palm leaf</h2>	2022.10.31 00196/e 9 Rev. 4 / MM
---	--------------------	--

Material description

The products are made from discarded palm leaf sheaths of the “Adaka” nut palm in India by a family business. The palm leaf sheaths used are the residues of the palm, which normally rot on the ground.

They are collected, cleaned with fresh spring water, placed in a water bath and are mechanically pressed into a mold at 120 °C. The pressure process per individual piece lasts 45 to 90 seconds per individual piece, depending on the size. No other additives for lamination etc. are required. Post-drying takes place in an oven heated with charcoal. Then the products are packed in film and cardboard boxes. Each article is unique and has its own structure.
