Content

Chemical Pulp

Chemicals

Material

Chemical pulp is produced either from softwood or hardwood. The wood chips are boiled together with chemicals and the major part of the lignin is removed. Chemical pulp is bleached in order to achieve a clean, bright and strong product, but also to increase the hygienic and absorbent qualities.

There are two major bleaching methods: ECF (elementary chlorine free) and TCF (totally chlorine free).

ECF is based on oxygen, chlorine dioxide and hydrogen peroxide. TCF is based on hydrogen peroxide and ozone.

Chemicals

All chemicals used in the process as well as the functional chemicals are assessed from an environmental, occupational health and safety and product safety point of view and have to fulfil given legal demands.

Functional chemicals are e.g.:

Dry strength agent

Colourants

Fixing agents

Process chemicals (for performing papermaking process) are e.g.:

Defoamer

Yankee coating agents

Dispersing agents

Slimicides

Retention aids

Packaging

Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes

Food Contact

This product fulfils the legislative requirements for Food Contact materials, confirmed by internal tests of non migration of dyes according to EN 646/648. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.

Environmental labelling: This product is certified according to FSC
